|    | <p><b>s-2-s fire</b> – Rescue Drag Bag for fire brigades, rescue teams, paramedics, Samaritans etc.. This version is mechanically very loadable and with its low weight (5.6 kg) and compactness (can be rolled up) very comfortable to carry.</p>  |
|    | <p><b>s-2-s fire/Velcro</b> – Velcro version / <b>s-2-s fire/belt</b> – belt version<br/>         The Velcro version allows quick packing of the victim even under zero visibility. The Velcro version is used to 98 %. The belt version is only worth considering for very special applications.</p>   |
|    | <p><b>Roll-fix</b><br/>         To hold the coiled s-2-s fire in place, this Velcro belt is necessary. Ideal for paramedics or for simple support when carrying. To attach the belt to a breathing apparatus, Roll-fix fire in combination with Bag-fix need to be ordered.</p>   |
|   | <p><b>Roll-fix fire – For mounting the system onto the breathing apparatus</b><br/>         This pack-belt contains a clamp (carbine) that is required to attach Bag-fix.</p>   |
|  | <p><b>Bag-fix – For mounting the system onto the breathing apparatus</b><br/>         With this fireproof support, the s-2-s fire can be mounted onto a breathing apparatus. Two eyelets allow simple clamping to attach the system during operation. The Velcro allows permanent fixing onto the breathing apparatus. We recommend attaching a Bag-fix to each breathing apparatus so the s-2-s can be attached to any device.</p> |
|  | <p><b>Sling bag</b><br/>         Is attached on the head side between the mat and the outside cover using Velcro and used to store the support sling, a support rope or other accessories. This bag can be integrated into an existing s-2-s without modification. <b>Please order support sling separately!</b></p>  |
|  | <p><b>Support sling</b><br/>         It is easier to rescue a person upstairs when the rescue squad is complemented by a third person that helps pulling from the head end using the support sling. Down the stairs, the support sling can be used to break the s-2-s at the foot end with a loop.</p>  |
|  | <p><b>Embroidered label</b><br/>         The Rescue Drag Bags are as standard delivered with a Velcro strip that can be marked with a permanent marker. There is also the possibility of an <b>embroidered name sign</b>. The Roll-fix fire is labelled with a second sign. That's why 2 labels are recommended for each coiled s-2-s.</p>  |
|  | <p><b>Force-cloth (can be upgraded)</b><br/>         For applications, in which the s-2-s is used above average (rough asphalt), it can be upgraded with a force-cloth that can be detached with Velcro. This way the replacement can be guaranteed when needed.<br/>         For normal applications, a force-cloth is not needed.</p>   |

|   |   |
|---|---|
|    | <p><b>Tunnel version (can be upgraded and replaced with force-cloth)</b><br/>         The tunnel version has been especially developed for very rough surfaces like for example tunnels, garages and cellar grounds. The lifetime is considerably extended with the ceramic stones and the smaller friction surface results in very good gliding properties. It can easily be replaced with a force-cloth and used inside of buildings.</p> |
|    | <p><b>Storage bag</b><br/>         Suitable for paramedics, Samaritans etc. that want to store the s-2-s protected from dust inside of the vehicles.</p>  |
|    | <p><b>s-2-s public</b> – Rescue Drag Bag for elderly homes, homes for disabled, hospitals, high-rise buildings etc.. The s-2-s public is offered with a thicker mat and can therefore not be coiled. It is meant to be stationary fixed in buildings, so nursing &amp; security staff and civilians have access to it.</p>  |
|    | <p><b>Thick mat</b><br/>         Recommended for elderly homes, hospitals etc., where mainly fragile or injured persons need to be rescued. The mat offers a slightly increased comfort. The s-2-s cannot be rolled up anymore if the thicker mat is inserted.</p>  |
|   | <p><b>Wall shell</b><br/>         Recommended for hanging up the system in buildings. The labelling hints the content and the s-2-s public is protected from dust. The shell is blue (rescue colour).</p>   |
|  | <p><b>s-2-s medicinal / chemical – the washable version</b><br/>         Not fireproof but washable. For operations in hospitals, at emergency services, chemical emergency units and funeral homes. This version consists of antiseptic material and is easily washed. Also the inside mat can be washed as easily as the outside cover.</p>   |
|  | <p><b>s-2-s customer</b> – custom-made Rescue Drag Bag<br/>         We gladly develop customer specific solutions.<br/>         You can check the status of current projects at <a href="http://www.retter.ch">www.retter.ch</a>.</p>   |
|  | <p><b>Repair service</b><br/>         If the s-2-s is not dragged over rough surfaces and the victim is packed correctly, the Rescue Drag Bag will last several years.<br/>         A repair however is possible. We offer cost-effective repair service. Ask your dealer for further information!</p>  |
